

NativeFactory AI

Autonomous Software Factory for NativeBuilder

Lablab.ai Hackathon Submission • Build Without Limits 2026

Author & Lead Creator: Frederico Alves

GitHub: @FREDERICO-SISTEMAS-UNIPAM | LinkedIn: frederico-alves-254226393

Live Production Vercel: <https://gallant-borg.vercel.app>

1. Problem & Value Proposition

- Manual App Development is Slow & Fragmented

Building full-stack web applications, database schemas, and API specs takes weeks of manual work.

- Static Landing Pages Fall Short for Hackathons

Hackathon evaluators require functional, deployed AI-native applications with real working workflows.

- Seamless Sponsor Ecosystem Integration

NativeFactory AI bridges prompt-to-code generation directly into the Natively.builder platform.

2. Autonomous 5-Agent Architecture

1. Spec Analyst Agent

Generates OpenAPI 3.0 specs & User Stories JSON.

2. UI/UX Architect Agent

Synthesizes HSL Dark Glassmorphic Design Tokens.

3. Frontend/Backend Dev Agent

Compiles HTML5/CSS3/JS & PostgreSQL Schemas.

4. QA & Security Inspector Agent

Runs vulnerability audits & AST linter (100/100 score).

5. NativeBuilder Publisher Agent

Packages 1-click export bundles for Natively.builder.

3. Unified 3-in-1 Ecosystem Suite

Ø<ßí 1. NativeFactory AI

Autonomous Software Factory & Automated Test Runner.

Ø=ÜÊ 2. OmniInsight AI

Real-Time BI Analytics & Autonomous Action Triggers (WhatsApp / Stripe).

Ø<ß'' 3. CanvasMind AI

Infinite Spatial UI Canvas & WCAG 2.1 Accessibility Inspector.
